### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 8-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Kikuchi et al. (JP 63-41169).

With respect to claim 8, Kikuchi et al. discloses an apparatus for adjusting printhead-to-media spacing including a stationary actuator 26 which is in an area to the left of the printing zone as shown in Figure 3A of Kikuchi et al. The stationary actuator 26 must inherently be fixed to the frame in one manner or another in order for the movable actuator 22 to press against it without moving it. Further disclosed is a bearing structure 23 that engages an elongate rail 25 and a movable actuator 22 which engages the stationary actuator when the carriage moves to the left of the printing zone. This engagement causes the bearing structure to turn which pivots the carriage 17 around guide rail 18 as shown by arrow 29 in Figure 2 of Kikuchi et al. Thus the screw changes rotary position and longitudinal position with respect to the position of the carriage. This adjustment has the effect of changing the spacing  $x$  between the printhead 16 and platen 19 as shown in Figure 2 of Kikuchi et al.

With respect to claim 9, the movable actuator 22 is a cam which is drivingly joined to the bearing structure 22 as shown in Figure 2 of Kikuchi et al.

*Allowable Subject Matter*

3. Claims 2-6 are allowed.

4. Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter:

Claim 10 has been allowed primarily for the rotatable finger that selectively engages and disengage the rail.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dan Colilla whose telephone number is (571)272-2157. The examiner can normally be reached Mon.-Thur. between 7:30 am and 6:00 pm. Faxes regarding this application can be sent to (703)872 - 9306.
